

CSR

Corporate social responsibility (CSR) is a strategy undertaken by companies to not just grow profits, but to take an active and positive social role in the world around them. The term is also associated with the related term corporate citizenship.

SSR

SSR, short for server-side rendering, is a technique in web development where the webpage's content is rendered on the server instead of the client's browser. The primary advantage of SSR lies in its ability to significantly enhance user experience by facilitating faster page transitions and quick loading times.

SSG

Static site generation is a technique for rendering web pages ahead of time, during the build process. The generated HTML, CSS, and Javascript files are then served to the client, resulting in websites loading faster and providing heightened security.

ISR

Intelligence, surveillance, and reconnaissance (ISR) systems and technologies. We provide comprehensive engineering expertise and experience to devise solutions to mission-critical challenges in defense and disaster response.
